Open to internships, remote roles & collaborations

PROFILE

Computer Science student and self-taught software developer who builds real, deployed products. I work across the stack — Python backends, modern JavaScript frontends, databases, authentication, payments and third-party APIs — with a growing focus on AI-powered applications. I learn by shipping: two of my products are live in production, and I document what works honestly rather than overstating it.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frontend: HTML, CSS, React, Next.js, Tailwind CSS

Backend: FastAPI, Flask, REST API design

Databases: PostgreSQL (Prisma, SQLAlchemy), SQLite

Auth & payments: JWT, OAuth 2.0, scrypt/bcrypt, Flutterwave

AI & integrations: LLM APIs (OpenAI, Anthropic, Gemini, xAI), Web Push (VAPID)

Game dev: Pygame, Ursina, Panda3D

Tools & platforms: Git, GitHub, Vercel, Supabase, Neon, CI publishing

SELECTED PROJECTS

Machora — Football platform

Live · in active development

Full-stack web application · machora-fc.vercel.app

- Built a football platform with live scores, match centres, head-to-head history, lineups, tables and multi-source news across 28 routes.
- Bridged **three data providers** (API-Football, football-data.org, TheSportsDB) behind one typed client with in-memory caching and stale-if-error fallbacks.
- Merged head-to-head history across providers with de-duplication and season aggregation — never showing fabricated 0–0 scores when data is missing.
- Implemented credentials + Google auth (Auth.js), a 12-model PostgreSQL schema (Prisma), favourites, reminders and opt-in notifications that respect a free-tier API quota.

Next.js 15 · React 19 · TypeScript · Prisma · PostgreSQL · Auth.js · Vercel

Deenly — Islamic lifestyle PWA

Live · in active development

Progressive web app · deenly002.vercel.app

- Built an installable PWA bringing prayer times, qibla, Qur'an reading and audio, duas, hadith, lessons and worship tracking into one offline-friendly app.
- Designed a FastAPI backend with JWT auth, bcrypt hashing, Google OAuth and **server-side-verified Flutterwave payment webhooks** (never trusting redirect params).
- Implemented real **Web Push with VAPID** so adhan notifications reach a closed app, and reworked the Qur'an audio player for gapless, lock-screen-controlled recitation.
- Kept user location on-device by default; proxying Islamic-data APIs behind a cache with rate limiting.

FastAPI · Python · SQLAlchemy · Vanilla JS · PWA · Web Push · Flutterwave

Dopamind — AI study studio

Functional prototype · public source

Web app · AI · github.com/abdulwarithadewariz-ux/Dopamind

- Built a study command centre that turns notes, PDFs and YouTube transcripts into **AI-generated flashcards and quizzes** grounded in the user's own material.
- Added a focus timer with XP and leaderboard, study groups with invite codes, and a streaming AI chat (xAI Grok).
- Honestly documented limitations: basic password hashing, no rate limiting, payments stubbed — all flagged as prerequisites before deployment.

Flask · Python · SQLite · xAI Grok · pypdf

Games & other software

Personal projects

- **Alpine Drift** — procedural 3D racing/drifting game: generated track, AI opponents, drift & boost mechanics, three camera modes, JSON settings with corruption recovery (Python, Ursina, Panda3D).
- **3D Ball Sort** — 3D puzzle with eight levels, level selection, settings and stats (Python, Panda3D).
- **Space Shooter** — 2D arcade shooter with enemies, collisions and escalating difficulty, packaged as a standalone Windows executable (Python, Pygame).
- **NEXTLEVEL TECH Store** — e-commerce site for gaming gear with catalogue, order enquiries, manual-transfer checkout and an admin dashboard (Flask, SQLite).

CONCEPT WORK

Echo World (game design) · **Reality Lens** (camera-first learning) · **Future You** (scenario-based planning) — documented product concepts exploring reactive narrative systems, computer-vision-assisted understanding and honest scenario simulation. Concepts only; no builds shipped. Full write-ups on my portfolio.

EDUCATION

Al-Hikmah University, Ilorin *In progress*

B.Sc. Computer Science

WHAT I'M LOOKING FOR

- **Software engineering roles** — full-stack product work, owning features end to end.
- **Internships & practical experience** — learning from more experienced engineers.
- **AI-powered applications** — LLM APIs inside real product workflows.
- **Remote & collaborative work** — comfortable shipping asynchronously.

References and detailed project case studies available on my portfolio. All project descriptions above reflect verified, working functionality; concepts are labelled as concepts.
